1996/1997 HMDA EDITS

QUICK REFERENCE TO UNDERSTANDING HMDA EDITS

HMDA edits are divided into three types of edits: Syntactical, Validity, and Quality. Each type represents the severity of the error and should be thoroughly understood to ensure that the data are accurate and reported in their entirety. The definitions of these edit types are as follows:

1. Syntactical (S)- Loan applications that have an error that prevents those applications from being uploaded to the FFIEC database. These errors range from incorrect activity dates to an invalid T2 record, which indicates that a loan application number was used more than once. These applications will not be recognized on the FFIEC database until the appropriate correction has been made.

S001-S006 are for agency use only.
2. Validity (V) - Loan applications that have incorrect information reported. The most common validity error is incorrect census tract/BNAs.
3. Quality (Q) - Loan applications that do not comply with the expected standard. These errors should be reviewed for correctness, and changed only if erroneous data has been reported.

Any of these edits that are not corrected will result in an erroneous disclosure statement. Loan applications with syntactical edits will not be represented on the disclosure at all; loan applications with validity and quality edits will be represented incorrectly.

An error-free HMDA Loan Application Register will result in an accurate disclosure statement.

EXPLANATION OF VALIDITY EDITS 285, 295, & 300

Regulation C (Home Mortgage Disclosure Act) has been recently amended to require financial institutions reporting NA in the MSA to either enter NA or to enter correct geographic information in the other three property location fields (state, county, census tract-BNA¹) of the HMDA-LAR for the property in question. Previously, geographic information was only verified when an MSA was identified on the HMDA-LAR.

Purpose: To comply with Regulation C, validity edits 285 and 295 were added to the HMDA Edits. These edits are intended to verify the validity of the property location information when the MSA field is reported as NA or a numeric code.

Validity edit 300 was modified to verify the validity of the census tract/BNA for the state/county combination reported regardless of what is reported in the MSA field.

Further Explanation: When MSA is NA or a valid FIPS code and the state (V285), state/county (V295), or state/county/census tract-BNA (V300) combinations are provided, there must be verification that the combinations are valid. Below are examples of the combinations, respectively:

NA/51/NA/NA -State

NA/51/059/NA -State/County

NA/51/059/4154.00* -State/County/Census Tract-BNA

*For the State/County/Census Tract-BNA combination, the Census Tract-BNA will always be verified. However, where the county is classified as small or untraced it is acceptable for a reporter to code census tracts or BNAs in small or untraced counties as NA on the HMDA-LAR form. If MSA is reported, then all fields must be coded.

Any combination of the property location reported when the MSA is NA, other than those aforementioned, are incomplete; therefore, those combinations will not be valid.

In comprehending the logic of these validity edits, it may be useful to begin at the census tract-BNA. If the census tract-BNA is reported by a lender, then the county and state **MUST** also be reported; if a county is reported, then a state must also be reported; and a state may be reported by itself, with a county, or with a county and census tract.

If **CENSUS TRACT-BNA** is reported, then

↓

COUNTY must be reported, then

↓

STATE must be reported where

↓

MSA = NA

In reverse order, if an MSA equals NA, then the acceptable combinations are state only, state/county, or state/county/census tract-BNA

¹Block Numbering Areas (BNAs) are small statistical subdivisions of a county for grouping and numbering blocks in non-metropolitan counties where local census statistical area committees have not established census tracts. Counties that are delineated with BNAs are considered small or untraced counties and are not required to be reported. It is *acceptable* for a HMDA reporter to code census tracts or BNAs in small or untraced counties as "NA" on the HMDA-LAR form.
